Conférence Francophone sur la Modélisation Mathématique en Biologie et en Médecine – Craiova, 12-14 juillet 2006

The structure of the control for an optimal harvesting problem

Elena Birliga

"Alexandru Ioan Cuza" University, Mathematics Faculty, Iasi.

In this work we investigate the optimal harvesting problem for some age-dependent population dynamics. Existence and uniqueness of the optimal control are established. We also state necessary optimality conditions. Then we investigate the geometry of the support of the control in order to obtain optimal harvest.
